Haelok – the company

Haelok Inc, **the inventor of one of the world's strongest mechanical pipe connection**, is a Zurich, Switzerland based privately held company, founded in 2005.

It's main focus is on the development, production and distribution of **its unique metal sealed pipe connector system**. The company is **ISO 9001 certified** and has global product approvals for different uses.

Haelok fittings are considered **the only mechanical alternative to welding** and Haelok delivers the best products for even the most demanding pipe fitting applications.

Our international client base proves our ability to provide first class service for global companies and customers – in short to solve todays pipe-connection challenges we are **the "perfect fit"**.

Disclaimer:

The technical data are not binding and not expressly warranted characteristics of the goods. These are subject to change. Please consult our General Terms and Conditions. Additional information is available upon request. It is the Designer's and Engineer's responsibility to select products suitable

for the intended service and to ensure that pressure ratings and performance data is not exceeded. Always read and understand the installation instructions. Never remove any piping components nor correct or modify any piping deficiencies without first depressurize and draining the system. Plant a tree and be nice to the elderly.

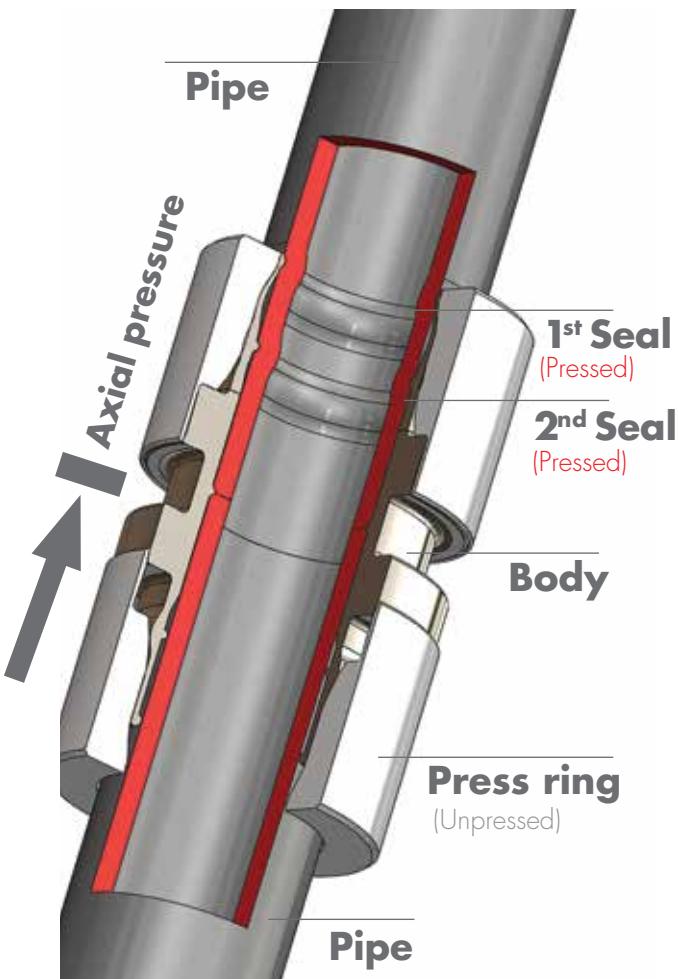

The HAELOK System „the perfect fit“

The HAELOK System, invented and perfected in Switzerland, provides **pure metal to metal sealing** onto the pipe utilizing its uniquely formed wedge design.

The HAELOK System guarantees a perfect connection of pipes in a few minutes and without welding. **Axial pressing** with up to 60tons creates a "**mechanical welding equivalent**" pipe-connection.

This unique pipe-connection system, without gaskets, ensures highly hermetic sealing for pipe dimensions from 12 mm up to 168.3 mm (6") and more.

Reliability and quality is machined into HAELOK System's unique design, and it's paired with an unparalleled ease of installation. To get the perfect connection within minutes you're not reliant on the skills of the installer, as it **can be installed even by unskilled workers**.

Average time to install a fitting:
less than one minute,
even by unskilled workers.
Imagine the benefits.

Quick, safe, simply brilliant

The industrial pipe construction places enormous demands on safety, durability, speed and last but not least cost effectiveness. These are the criteria upon which pipe systems are selected and applied.

HAELOK pipe connection systems offer an incredibly fast, certified, safe and cost effective press fitting solution second to none. The only alternative to HAELOK fittings is welding, but the HAELOK system offers a safe, reliable, purely metallic sealing solution for fluid and gas systems in minutes! And yes, these connections are fully capable for very high temperatures and high pressures and offer ample performance reserves, certified by countless international test results and certificates.

Haelok fittings can be used in different materials, such as stainless steel, carbon steel, or others on request.

Time savings

HAELOK short installation time is one of its great benefits. The HAELOK system reduces the installation efforts up to a factor 10 to welding! Our piping system is connected quickly, efficiently and without any open flame, offering maximum security.

Price/Performance

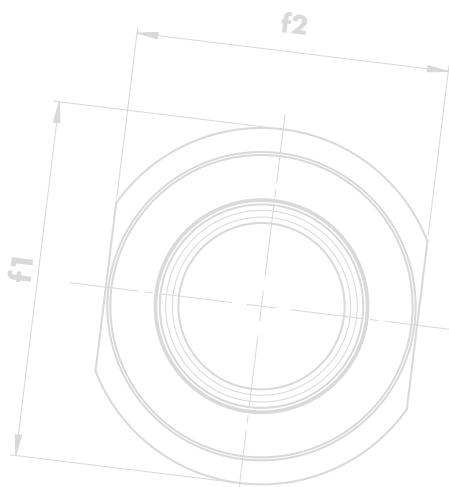

Safe, stable and permanent metallic sealed connections without gaskets is a primary objective in all areas of industrial pipe installation, and the HAELOK system can deliver exactly this.

The total installation costs and time are substantially lower than any other application on the market, making the HAELOK pipe-fitting system the installation of choice.

Various applications

For many different applications, various pipe diameters, materials and fluid contents HAELOK is "the perfect fit" and can supply the appropriate fittings and press tools for every job.

At your installation site there's absolutely no need for welding or screwing and the only control necessary after installation is a simple visual check to know that your connection is installed correctly and the system is safe and secure.

Safety and Reliability

Quality and reliability is "machined" into the HAELOK system – the easy to install press technology eliminates all obvious hazards, the metal-to-metal sealing's stress resistance is unrivaled, now certified up to 1140bar.

- **Purely metallic seal without any further material**
- **No hot work, fire or explosion risks are eliminated**
- **Spark free**
- **Zero contamination in the pipe**
- **Gas tight**
- **Stress resistance equal to welding**
- **Serial numbers guarantee traceable material and process information down to every fitting**
- **Swiss precision**

Cost benefits

The easy handling of the HAELOK system not only dramatically reduces installation costs, but also provides the most secure and consistent quality through the installation process - and during the lifetime of the pipe system.

HAELOK system saves time and labor cost thus reduces total installation cost significantly. It increases your margins and your chances to win more projects.

- **Faster installation, therefore a real cost advantage**
- **No need for certified labour**
- **No high-precision pipes needed**
- **Works equally well with seamless and welded pipes**
- **No inspection by X-ray or other methods needed**
- **Substantially reduces downtime during maintenance**

Installation Benefits

The easy to handle and install press technology eliminates all obvious hazards and risks that are common during welding. And compared to cutting ring fittings, and other applications the HAELOK systems prevails.

- **About 10x faster than welding**
- **No fire or explosion risk**
- **No need for "gas free" environment**
- **No need to dry or drain the system**
- **Works in small, difficult to access spaces**
- **Supplied pre-assembled, no assembly errors**
- **Very simple installation**

versus

The Haelok press tool

The hydraulic installation tool behind the world's strongest mechanical pipe connection, installs the HAELOK fittings in a few simple steps. It delivers every-time accurate, reliable and repeatable results, regardless of the fitting material or the mood of the installer. The HAELOK press tool generates form and restrained pipe joint up to 60(!) tons of axial pressure, forming a physical cold forming of pipe and fitting.

It's as strong as welding - but the only mechanical alternative.

**detailed description
of the
Haelok Press Tools
see page 62**

The Haelok press tools are characterized by:

- **Fully automatic press process**
- **Very short press times (<1min)**
- **Ergonomic design easy to handle**
- **Reduced weight**
- **Various models: The right tool for every job**

The Haelok System

Test Requirements and Certificates

Test requirements

The following tests have been carried out and **passed** in accordance with IACS (International Association for Classification of Ships) unified rules for piping, design and testing URP 2.11:

Tightness test requirement

- **70 bar with nitrogen (N_2)**
- **tested for 5 min tight**

Pull-out test requirement

- **$1 \times PN + F_{ax}$ (PN as appropriate)**
- **tested for 5 min. without leakage or other faults**

Burst pressure tests (see results p10)

- **$4 \times PN$**
- **tested for over 5 min tight without any leakage**

Vibration- (1) and Pressure pulsation- (2) tests

- **(1) defined amplitude over 10×10^6 cycles at frequencies of 20-50Hz**
- **(2) $1.5 \times PN$ over 500'000 cycles**

Vacuum test requirements

- **300mbar absolute**
- **tested for >15 min tight**

Fire resistance requirements

- **Proofed to ISO 19921 and certified to IACS P.2.11.5.5.6.**
- **Full compliance with API-6FB**
- **800°C, tested for 30min, with no pressure loss**

International certification standards

Haelok is in full conformity to ASME and fulfills all requirements of IACS (International Association for Classification of Ships). IACS is regarded as the most demanding industry certification.

Haelok holds following certificates:

German Lloyd

Haelok has the [certificate 91759-97 HH](#) and complies to the regulations for the performance of type tests on mechanical components and equipment, Part D9 of German Lloyd.

Det Norske Veritas

Haelok has the [certificate P-13887](#) and complies to the standard for certification No. 2.9 of the type approval programm No. 5-792.20.

Lloyd's Register

Haelok has the [certificate](#)

Wehrtechnische Dienststelle für Schiffe und Marinewaffen, (WTD71)

Haelok has the [certificate 2012](#) of the WTD of the German Marine.

Russian Maritime Register of Shipping

Haelok has been awarded with the [certificate
No. 09.00419.009](#)

American Society of Mechanical Engineers (ASME)

Haelok pressfittings are in conformity to [ASME B31.1 Power Piping / B31.3 Process Piping](#)

The Haelok System Standards and Specifications

Technical specifications

Standards:

Temperature range: -55°C up to $+400^{\circ}\text{C}$

Working pressure: up to 1137 bar (see list below)

Standards: Useable for seamless and welded pipes with the dimensions to EN ISO 1127, EN 10220 D3/T3, ASTM A213 and ASTM A269

Materials:

Press Ring and Fitting Body: Carbon steel 1.0570 (AISI 1024) or Stainless steel 1.4404 (AISI 316L)

in all combinations, other materials on request

Pipe diameters:

13.5 – 168.3 mm (Outside diameter in inch)

12 – 80 mm (Outside diameter metric)

bigger diameters on request

The Haelok System

Pipe specifications

Pipe specifications

Seamless and welded pipes with dimensions to ASTM A213/A269, EN 10220:2002 for Carbon Steel Pipes, and to EN ISO 1127:1996 for stainless steel pipes. Pipes shall be of good quality, fully annealed construction with maximum Rockwell B scale hardness of 90.

Admissible pipe tolerances:

to EN ISO 1127 or EN 10220

Outside diameter D3: $\pm 0,75\%$, but min. $\pm 0,3\text{mm}$

Wall thickness T3: $\pm 10\%$, but min. $\pm 0,2\text{mm}$

Hardness: $\leq 90 \text{ HRB}$

to ASTM A213/A269

Outside diameter D3: 13,72 to 38,1mm: $\pm 0,13\text{mm}$

38,1 to 88,9mm: $\pm 0,25\text{mm}$

Wall thickness T3: $\pm 10\%$

Hardness: $\leq 90 \text{ HRB}$

Outside diameter in Inch

Pipe serie 1 to EN 10220, to EN ISO 1127 with tolerances D3/T3 and to ASTM A213/A269:

DN	Size	OD ¹⁾	OD ²⁾	s	d
10	1/4"	13,5	13,72	1,8	9,9
	3/8"	17,2	17,15	1,8	13,6
15	1/2"	21,3	21,34	2,0	17,3
20	3/4"	26,9	26,67	2,3	22,3
25	1"	33,7	33,41	2,6	28,5
32	1 1/4"	42,4	42,16	2,6	37,2
40	1 1/2"	48,3	48,26	2,6	43,1
50	2"	60,3	60,33	2,6	55,1
65	2 1/2"	76,1	73,0 ³⁾	3,6	68,9
80	3"	88,9	88,9	4,8	79,3
100	4"	114,3	114,3	6	102,3
125	5"	139,7	141,3 ³⁾	7,1	125,5
150	6"	168,3	168,3	8	152,3

¹⁾ Pipe series 1 to EN 10220:2002 or to EN ISO 1127

²⁾ Pipes according to ASTM A213/A269

³⁾ Outside diameters (OD) of pipes to ASTM 213/269 make separate fitting size necessary

Metric outside diameter

pipe series 2 and 3 to EN 10220 or to EN ISO 1127 with the tolerances D3/T3:

DN	OD	s	d _i
10	12	1,8	8,4
15	18	1,8	14,4
15	20	2,0	16
18	22	2,3	17,4
20	25	2,6	19,8
	28	2,6	22,8
25	30	2,6	24,4
32	35	2,6	29,8
	38	2,6	32,8
	54	3,6	46,8

Dimensioning of the wall thickness:

The dimensioning of the pipes is done to DIN 2413 or to ANSI B 31.3 for a given pressure for the particular application. For further specifications consult the pipe manufacturers.

Technical definitions:

(see drawings on following pages)

M: Metric screw thread to DIN ISO 261

R_p: Cylindrical internal thread with pressure tight joints which are made on the threads to EN 10226-1

R: Cylindrical external thread with pressure tight joints which are made on the threads to EN 10226-1

G: Cylindrical internal and external thread with pressure tight joints which are not made on the threads to ISO 228-1

DN: Diamètre Nominal - Nominal size (inside diameter)

PN: Pression Nominal - Nominal pressure

OD: Outside Diameter

s: wall thickness

d_i: inside diameter

All dimensions in millimeters, except specially marked
Errors and technical changes reserved

For 90°shapes Haelok offers
bended pipes in connection
with our straight fittings.
The connection is done with
two straight fittings.
On request and on minimum
quantities Haelok supplies
one-piece, hot forged bends.
Please contact your customer
service representative for
further information.

Haelok PT press tools and accessories

The ease of usage and the various functionalities combined with safety at work are important elements of the Haelok installation system.

Our optimized design of the small tooling reduces the installation space to a minimum – so you can perform installations in very narrow spaces but with consistent quality and safety. Our high precision tools comply with the CE standards and ensure safe, durable and tight connections.

Haelok achieves its optimum functionality when operating as a system (fitting, press tool, hydraulic unit) because all components are always perfectly matched to each other.

tools and parts
for Haelok press fittings

The Haelok Press Tools a complete system

The Haelok press tools:

The press tools required for permanently tight connections are part of the system. The range extends from electrohydraulic to battery systems and handpumps driven press tools for fast work progress. Our innovative technology allows very short connection time from 5 seconds for smaller dimensions up to 35 seconds for larger couplings.

The Haelok press tools technology allows a higher pressing speed and provides economic efficiency to your installation.

The Haelok System is the outstanding alternative to welding but as well as to flanges and cutting-ring connections.

The Haelok press tools, named PT1, PT2, PT3, ..., PTn, feature a hard anodised housing for ultimate durability and compact closing mechanism that will be almost maintenance-free.

By changing the inlays, within seconds we allow users to adapt the press tools to all diameters, ensuring sealing of Haelok couplings from 12mm to 168,3mm.

**The Haelok
press tools
PT1, PT2, PT3.**

The Haelok hydraulic units:

The press tool power is provided by an industrial, proven hydraulic unit fitted in a special case for optimal transport and protection on the construction site.

The standard model is a remote-controlled electric unit (230/110V).

The robust unit works in low wear and the sophisticated remote control guarantees an automated process. In this way faulty pressing is completely avoided.

Additional battery-driven HPU's are available to extend the range in confined environments.

For the use in high hazardous areas we recommend a hand pump. It fulfills the international safety requirements completely.

The new transport cases, ruggedized and safe for every user.

Errors and technical changes reserved

The Press tools come in a rugged transport case
– various inlays, according to the pipes in use,
make the tool very flexible. The inlays can be
ordered separately.

Press tools are delivered with the according Inlay sets.
An Inlay Set consists of 4 inserts, two for the upper and two for the lower part of the tool.

Easy Installation!
The inlays are placed inside the presstool easily and without the need of a special installation tool.

The Haelok System Installation and Handling of the Haelok press tool

Installation guide:

The Haelok press tool provides quick, easy and accurate pressing result, that are always reproducible.

With the Haelok system you have much lower installation times at constant high quality and you generate lower costs when compared to any conventional joining techniques. Plus you are not reliant on the skills of the installer – the fitting can be installed even by unskilled workers.

You get a perfect connection in minutes.

1.

CUT. Cut the pipe perpendicular.

2.

DEBURR. Clean the cut pipe inside and outside.

- 3.**
INSERT. Insert pipe to the edge of the fitting.

- 4.**
MARK. Mark the pipe at the fitting end for visual control.

- 5.**
ATTACH. Attach the press tool firmly over the connection you wish to make, so that the pullring fits into the grove of the fitting.

- 6.**
LATCH. Close the lockring lever on the tool firmly. (important)

- 7.**
PRESS. Turn on the hydraulic power unit by using the remote control. After a few seconds the pull ring lines up with the housing.

- 8.**
READY! A perfect connection is created. A visual check on the compression is sufficient: Press ring lines up with the shoulder.
